

Gradient Pulse — AI News, Explained

2026-09-16 · Weekly edition · Issued 08:00 CDT

Meta launches Muse, its personal AI agent

- Meta announced Muse, a personal AI agent for US users 18+, available as a standalone iOS/Android app, at muse.ai, and inside WhatsApp. It sends emails, books travel, fills out web forms, negotiates bills, and makes purchases. — [TechCrunch](#)
- Muse runs on Muse Spark, described as Meta's most capable model for agentic work. It keeps working in the background after the app closes and returns when it needs approval. Purchases use Link by Stripe one-time-use cards; free tier plus paid plans for complex tasks; AI glasses support planned. — [TechRepublic](#)
- Trust questions: internal Meta posts seen by Reuters cite employee reports of reliability bugs and one case of improper iCloud photo access. The launch had been delayed from April over safety. Meta says it has now met its minimum safety bar. — [Reuters](#)
- Wall Street reaction: Meta stock rose 6.1% on launch day; a Morgan Stanley analyst wrote Meta could win a substantial piece of an estimated \$30 trillion consumer AI-agent market. — [Barron's](#)

The agent business model arrives

- OpenAI is testing advertiser-sponsored agents inside ChatGPT: after interacting with an ad, users can chat with a business-sponsored agent. Clearly labeled and separate from ChatGPT's own responses; select US advertisers for now. — [Reuters](#)
- ChatGPT Ads Manager lets advertisers build campaigns from plain-English prompts. HubSpot is the first CRM partner, Shopify the first e-commerce partner (Shopify app goes international September 23). — [Reuters](#)
- Anthropic folded Claude chat and Cowork into a single interface and launched Claude Docs and Claude Slides in beta, with export to Google Docs, Word, PowerPoint, and PDF. Rolling out to Pro/Max first. — [Reuters](#)

Hype Check: the 'slow down' chorus

- Anthropic CEO Dario Amodei published a 3,800-word essay calling for 'pacing the frontier' of AI capabilities, warning of loss of control, cyberattacks, and bioterrorism. — [CNN](#)
- Bloomberg reported Sam Altman told OpenAI staff the company is open to slowing development and pacing it alongside other labs. — [Reuters](#)
- Anthropic's Sept 10 report details blocking attempts to use its models for bioweapons research, plus surveillance, scams, and missile-guidance work linked to actors in China, Russia, and Yemen. — [USA Today](#)
- OpenAI endorsed bipartisan bioweapon-prevention bills and a FRONTIER Act provision requiring independent safety evaluators at leading AI companies. — [Reuters](#)
- Hype Check verdict: concern CONFIRMED — unusually unified, with specifics. But the same week, Anthropic signed a 2.16GW Australia data-centre lease (Reuters). Watch what they build, not just what they publish. — [Gradient Pulse](#)

Release radar: Koa, GPT Image 2.5, Muse Voice Transcribe

- Koa: Salesforce's first CRM reasoning model for Agentforce, built on NVIDIA Nemotron 3 Super with 27 years of CRM data. Matches/beats leading models on CRM actions with 3x fewer errors; open-weight; fewer tokens per task. — [Salesforce](#)
- TechCrunch's read: Koa is 'everything the AI labs should fear' — enterprise needs diverging from frontier labs toward smaller, cheaper, specialized models inside the customer's own walls. — [TechCrunch](#)
- GPT Image 2.5 (Flare for speed, Sunburst for precision): 4K output, multi-turn editing. Pricing \$5/\$8/\$30 per million tokens; ~\$0.006/image low quality to ~\$0.211 max; new high tier ~4x cheaper than old high. — [Reuters](#)
- Muse Voice Transcribe: real-time multilingual speech in 80ms chunks, 70+ languages, 20+ speaker labeling. Meta claims #1 on Artificial Analysis' streaming STT leaderboard — vendor claim, third-party board. — [TechRepublic](#)
