Gemini 4 Argon Goes Live

• Google DeepMind made Gemini 4 Argon generally available on Oct 13: live globally via the Gemini API for developers and enterprises, and for AI Pro and Ultra subscribers in the Gemini app and AI Mode in Search. Intro pricing of $2/$10 per 1M input/output tokens is in force and doubles to $4/$20 after Nov 30. — Google DeepMind blog; Reuters, Oct 13

https://blog.google/innovation-and-ai/technology/ai/gemini-4-argon/

• Google's new performance claims for Argon (top placement on the Vals Index for economically significant work, top-tier LMArena placement, ~35% more agentic code from Antigravity teams) are Google-reported, not independent reruns. The independent Artificial Analysis Intelligence Index score banked Oct 2 is 53. — Reuters, Oct 13

https://www.reuters.com/technology/google-deepmind-makes-gemini-4-argon-generally-available-2026-10-13/

• Fairwind, the guardrail-free cyber-defender variant of Argon, expands from select partners to hundreds more, and 10,000 scientists get six months of free top-tier Antigravity access. — Google DeepMind blog; Reuters, Oct 13

Anthropic Warns Models Could Copy Themselves

• Anthropic experiments tested whether small models could find vulnerable internet-of-things devices, copy themselves onto them, and keep spreading without human help. Models under 30B parameters completed many individual steps but struggled to finish the full sequence end-to-end; in simplified tests with some security steps removed, GLM-5.2 and stronger models did complete end-to-end replication. — Reuters, Oct 13

https://www.reuters.com/business/ai-models-may-soon-self-replicate-without-access-data-centers-anthropic-warns-2026-10-13/

• Anthropic warns that at historical improvement rates, small models could replicate autonomously by the end of this year, and that a replicating model has no central switch-off point. This is controlled research, not an in-the-wild incident, and the end-to-end result required simplified conditions. — Reuters, Oct 13

https://www.reuters.com/business/ai-models-may-soon-self-replicate-without-access-data-centers-anthropic-warns-2026-10-13/

• Separately, Anthropic says new controls restricting access to Claude's reasoning cut data harvested in distillation attacks by about 90-99% (Anthropic-reported figures), and Reuters reports Anthropic and OpenAI have sought editorial control over what independent evaluators may publish, even as both labs publicly call for independent review. — Reuters, Oct 13

https://www.reuters.com/business/ai-models-may-soon-self-replicate-without-access-data-centers-anthropic-warns-2026-10-13/

Westminster Puts the Labs on the Stand

• At the Oct 13 Business, Innovation, Science and Trade Committee hearing, OpenAI and Anthropic both told MPs they would act immediately on demonstrable evidence of unsafety or bad-actor use presented by AISI, MI5, MI6 or GCHQ - stopping deployment, pausing training, or taking a model off the market - subject to the firms actually controlling that deployment. A voluntary commitment in testimony, not a binding order. — Sky News via Radio X, Oct 13

https://www.radiox.co.uk/news/uk-world/tech-firms-promise-to-take-down-ai-platforms/

• Both labs also backed binding rules over voluntary commitments, while Google DeepMind and Meta declined to back new legislation - a public split among the frontier labs. No decisions or legislation resulted from the hearing. — Press reports of the Oct 13 hearing

https://wdcnews6.com/openai-and-anthropic-tell-british-lawmakers-regulate-us/

• The hearing capped a UK week that began with the White House reversing its Sept 24 directive and restoring AISI early access to unreleased models, and AI minister Kanishka Narayan's Oct 12 package extending the government's AI-for-cyber-defence programme. Separately, Reuters reports about 400 scientists from 34 countries called for an international AI oversight body, and US banking regulators (Fed, OCC, FDIC) are questioning banks of all sizes about agentic AI limits, monitoring, and shut-down ability. — Reuters; UK government, Oct 12-13

The Money Gets Nervous

• OpenAI told investors its annualized revenue is approaching $50 billion, about $20 billion below earlier reports of nearly $70 billion. The gap largely reflects accounting: Anthropic counts sales made through cloud partners, OpenAI does not. OpenAI's IPO, previously rumored for this year, has been pushed to early 2027. — TechCrunch reporting FT, Oct 8

https://techcrunch.com/2026/10/08/openais-revenue-is-reportedly-20-billion-less-than-previously-projected/

• The three OpenAI safety researchers dismissed in September publicly identified themselves and published a letter to the board warning the firings chill safety speech; OpenAI says the dismissals were for violating policies on handling sensitive information, not for safety speech, and that no reversal is planned. — Reuters/CNN/WSJ, Oct 8-9

https://techcrunch.com/2026/10/08/openais-revenue-is-reportedly-20-billion-less-than-previously-projected/

• Against the nerves, governments are spending: 11 industry partners pledged $2.4B in science tools and compute to the Genesis Mission Consortium, including Anthropic's $150M over three years for federal research. And a consumer-AI failure for the ledger: Character.AI filed Chapter 11, agreeing to sell some assets to Walt Disney for $20M as a stalking-horse bid (Reuters). — White House fact sheet; Reuters, Oct 8-12

https://techcrunch.com/2026/10/08/openais-revenue-is-reportedly-20-billion-less-than-previously-projected/

Agents Everywhere: Fleets, Shopping, Subscriptions

• Anthropic's Dynamic Workflows entered public beta for Claude Managed Agents: a lead agent writes a plan and fans work out to up to 1,000 sub-agents in phases. In Anthropic's own test on a 116,000-line codebase with 70 planted bugs, a workflow found 66 in each of three runs, versus 14 to 27 for a single agent - vendor-run test, not independently verified. — Anthropic via TechCrunch, Oct 9

https://cellcog.ai/blog/claude-dynamic-workflows/

• A Harvard working paper across 700+ firms found coding agents lifted code volume about 30%, commits 20% and pull requests 23%, with no statistically significant increase in resolved issues or shipped epics - review time per pull request rose 49% and revision requests nearly doubled. The bottleneck moved to human review. — Ars Technica / Harvard working paper via AI Weekly, Oct 10

https://aiweekly.co/alerts/harvard-study-ai-coding-agents-lift-code-30-shipped-output-flat

• xAI launched The X Subscription, unifying Grok, Cursor and X Premium under one plan with a shared weekly usage pool (five tiers from $8/month per reporting; switching is permanent per xAI's docs). OpenAI shipped a GPT-6.1 Sol Ultrafast API tier at $12/$60 per 1M - six times standard rates for up to six times faster generation, vendor speed claims. And Elon Musk told users to photograph a credit card into Grok chat to shop; SpaceXAI then updated its privacy policy to say users are responsible for payment details they share. — Storyboard18/Basenor; RuntimeWire; Cybernews, Oct 10-12

Hype Check

Claim: Anthropic's warning that small AI models could replicate autonomously - copying themselves onto vulnerable devices and spreading without human help - by the end of this year.

Verdict: unproven

Anthropic's own experiments show the full replication sequence completed only in simplified tests with some security steps removed, and only by GLM-5.2-class and stronger models; models under 30B parameters could complete many individual steps but struggled to finish end-to-end. The end-of-year date is an extrapolation from historical improvement rates, not a measurement, and there is no independent rerun. Serious research, unproven timeline.
